

Standard Connections Gateway

Standard Connections Gateway enables connections with any CSP, ISP, carrier, internet exchange, Cologix Access Marketplace or customers within the Cologix facility. The implementation and round-the-clock support from Cologix's experienced and reliable team of technicians is included.

Standard Connections Gateway is available in the following Data Centers

- Columbus – COL1
- Dallas – DAL1
- Jacksonville – JAX1
- Minneapolis – MIN1
- Montréal – MTL3
- Vancouver – VAN1 and VAN3

Standard Connections Gateway Features

- Space and power
- Unlimited cross connects within the data center
- Choice of one cross connect with each rack unit (RU) or one port on Cologix's Access Marketplace
- One hour of Remote Hands service for initial set-up for each RU
- Scalable model up to three RUs within the Standard Connections Gateway environment

Standard Connections Gateway Benefits

Rapid access to strategic interconnection hubs

Low-risk network expansion

Easy access to many carrier/provider networks and services

Standard Connections Gateway

Cologix's Standard Connections Gateway is available in one rack or up to three rack units within a secure environment accessible only to Cologix personnel. Our experienced technicians will install your switch, router or media converter and get you powered up and connected to any network and end user within our facility.

Experience a point-of-presence (PoP) within a secure, stable environment.

You will receive access to cloud service providers, carriers, networks and other providers in the Standard Connections Gateway environment.

Included in your initial deployment is a single cross connect to any network or end user within Cologix's facility, or a port on Cologix Access Marketplace. You will also have access to other networks, customers and internet exchanges with additional cross connects at current list rates.

With Standard Connections Gateway, you will experience instant access to multiple partners and cloud providers within Cologix's robust interconnection ecosystem.

Our technicians will deploy power circuits to a shared cabinet where your switch is located to ensure security of your equipment and power redundancy.

Having a redundant power supply in a secure Cologix Data Center ensures continuous operations to help prevent costly downtime.

Our technicians install switches, connect the switch/router to the power source and provide cross connects to the requested LOA/CFA or to Cologix Access Marketplace. Provisioning cross connects and Remote Hands services are also included by request.

Rest assured knowing your equipment is installed and supported by Cologix's trusted technicians.
